Crown and Bridge

Gold

All-Ceramic

We use only the finest materials in the industry. The Duceram porcelain we use on our PFM crowns was chosen for its durability and vitality. It produces a natural look that closely matches other teeth in the mouth.

As the field of dentistry continues to evolve and change, we strive to be on

the cutting edge, offering new products and materials, technology, and information to the dentists we serve. If you have a question about a product or material not listed in our brochure, please call.

We use Jensen metals almost exclusively for our all-metal restorations. As gold continues to be the best choice due to its durability and functional success, we offer a full range of alloys to meet your patient's needs.

We offer several all-ceramic options to meet your patient's needs.

- **Layered Zirconia**
This zirconia-based all-ceramic core produces one of the toughest crowns made today. Anteriors, posteriors, single crowns or multi-unit cases, layered Zirconia crowns deliver outstanding aesthetics.
- **Full Contour Zirconia**
This is the ultimate in strength and value. The FZI is a high-strength monolithic restoration milled from a highly translucent zirconia block. You no longer have to choose between aesthetics and strength. Gold costs are eliminated. This crown is also ideally suited for bruxer patients who would like a more natural-looking restoration.

Services

You're counting on us and we deliver. You can rely on the many services we offer such as:

- ***Guaranteed on-time delivery.***
- ***Free Daily Pick-up and Delivery in our service area.***
- ***30-day satisfaction guarantee on any product we make and a 12 month guarantee on any case that fails due to our manufacturing process.***
- ***In-person or phone consultation with one of our knowledgeable experts.***
- ***Referral benefits.***
- ***Expedited delivery when available.***

Fabrication Details

Allow 10 days in the lab for fabrication of Gold, Ceramic and PFM crowns. Implant crowns may require additional time in the lab.

All crowns fabricated in the U.S.A.

- **Pressed E-max**
The E-max crown combines strength and beauty in a single all-ceramic material that offers the versatility of conventional cementation. E-max lithium disilicate produces optimal esthetics and provides a monolithic strength of 400 MPa while producing low wear on opposing dentition.
